# Mint OEM install

Choosing OEM install in the boot manager sets up the base system, additional software/drivers can be installed and when ready, a link to "Prepare for shipping to end user" is on the desktop. This will reboot the system and on next boot, the system will ask for user details for regular use.

https://linuxmint-installation-guide.readthedocs.io/en/latest/oem.html

The 'prepare for shipping' link does not appear when the OEM install was performed without wifi/network access.

Solution appears to be to connect to network, install/update "oem-config" and running the command "oem-config-prepare".
