Mail Redirect <https://addons.thunderbird.net/en-GB/thunderbird/addon/mailredirect/>

<https://mailredirect.sourceforge.io/>

Provider for Google Calendar <https://addons.mozilla.org/thunderbird/addon/4631>

Open Google Calendar

<https://addons.thunderbird.net/en-GB/thunderbird/addon/open-google-calendar/>

LookOut (fix version) <https://addons.thunderbird.net/en-GB/thunderbird/addon/lookout-fix-version/>
<https://github.com/TB-throwback/LookOut-fix-version/>

Thunderbird Outlook/Office365 calendar

1. Via addon manager in TB, install tbsync addon as well as provider for exchange activesync.
<https://addons.thunderbird.net/en-GB/thunderbird/addon/eas-4-tbsync/>
<https://addons.thunderbird.net/en-GB/thunderbird/addon/tbsync/>
2. then go to tools → addon preferences → tbsync
3. account actions → add new account → exchange activesync
4. office365 account, give name and add work email
5. authenticate as work account with MS password
6. select the new account, enable sync, tick boxes of contacts and calendars, set periodic sync to 10 and click synchronize now button.
7. calendar entries now show up in lightning

not working as of Feb 2020:

- sending or responding to meeting invitations
- push sync
- Lightning sync buttons do not trigger a sync of EAS calendars

also, this only shows your own calendar, not any others that may have been added to outlook.

Thunderbird Label Row Colours

To have better visibility of labels of mails in the mail list, the style can be changed by closing Thunderbird, editing or creating a chrome/userChrome.css file in the Thunderbird profile directory, then starting Thunderbird again.

[userChrome.css](#)

```
/*
 * Label colors. Highlight background rather than change font color.
 */

/* Default Important Label */
treechildren::-moz-tree-cell(lc-FF0000) {
    border-bottom: 1px solid #FF0000 !important; background-color:
#FFCCCC !important;
}
treechildren::-moz-tree-cell-text(lc-FF0000) {
    color: #000000 !important;
}
treechildren::-moz-tree-cell(lc-FF0000, selected) {
    background-color: #FF0000 !important;
```

```
}
treechildren::-moz-tree-cell-text(lc-FF0000, selected) {
    color: #FFFFFF !important;
}

/* Default Work Label */
treechildren::-moz-tree-cell(lc-FF9900) {
    border-bottom: 1px solid #FF9900 !important;
    background-color: #FFCC99 !important;}
treechildren::-moz-tree-cell-text(lc-FF9900) {
    color: #000000 !important;
}
treechildren::-moz-tree-cell(lc-FF9900, selected) {
    background-color: #FF9900 !important;
}
treechildren::-moz-tree-cell-text(lc-FF9900, selected) {
    color: #FFFFFF !important;
}

/* Default Person Label */
treechildren::-moz-tree-cell(lc-009900) {
    border-bottom: 1px solid #009900 !important;
    background-color: #99FF99 !important;}
treechildren::-moz-tree-cell-text(lc-009900) {
    color: #000000 !important;
}
treechildren::-moz-tree-cell(lc-009900, selected) {
    background-color: #009900 !important;
}
treechildren::-moz-tree-cell-text(lc-009900, selected) {
    color: #FFFFFF !important;
}

/* Default Todo Label */
treechildren::-moz-tree-cell(lc-3333FF) {
    border-bottom: 1px solid #3333FF !important;
    background-color: #CCCCFF !important;}
treechildren::-moz-tree-cell-text(lc-3333FF) {
    color: #000000 !important;
}

{-moz-image-region: rect(0px 112px 16px 96px);}

#priorityCol
{-moz-image-region: rect(0px 128px 16px 112px);
-moz-binding: url("chrome://global/content/bindings/tree.xml#treecol-
image");
padding-left: 0 !important;
width: 23px;
max-width: 23px;}
```

Thunderbird window position

Thunderbird does not remember the last window and display position. Using `wmctrl` and `xdotool` the window position can be set and it can be snapped to use top half of left-most monitor. Adjust as necessary. The adjustment to `thunderbird.sh` probably will be overwritten on Thunderbird update. Alternative using wrapper shell script would need to be used if that's the case:

```
#General command line commands for testing:
#Set thunderbird window to top left most screen
wmctrl -i -r $(wmctrl -l | grep Thunderbird | cut -d " " -f1) -e
0,0,56,1200,1087
#Snap thunderbird window to top half of screen (keycombination windows+up)
xdotool windowactivate $(xdotool search --name thunderbird | tail -1) key
"Super_L+Up"

#main Thunderbird.sh script adjustment:
sudo vi /usr/lib/thunderbird/thunderbird.sh
add just before exec $MOZ_LIBDIR/$EXE "$@" at end of file:
    #Set thunderbird window to top left most screen
    (sleep 3;wmctrl -i -r $(wmctrl -l | grep Thunderbird | cut -d " " -f1) -
e 0,0,56,1200,1087) &
    #Snap thunderbird window to top half of screen (keycombination
windows+up)
    (sleep 3;xdotool windowactivate $(xdotool search --name thunderbird |
tail -1) key "Super_L+Up") &
```
