

WhatsApp/MS Teams Launcher

Chrome removed the launchpad to launch single-window web apps, but it's easy to create a desktop launcher.

First install chromium:

```
sudo apt-get install chromium-browser
```

Now, right-click desktop, add launcher and configure as following:

click on rocket icon to change icon.

Name: WhatsApp

Command: chromium-browser --app=http://web.whatsapp.com

confirm. Add to menu when asked (if desired).

For MS Teams, the tenant ID can be specified to log into a particular server immediately.

Icons to be copied to ~/.local/share/icons or /usr/share/icons/:
