Day of the Tentacle

Various notes for DOTT on steam on Linux

```
DOTT Linux:
cd "/home/username/.steam/steam/steamapps/common/Day of the Tentacle
Remastered/"
./Dott --log

on 64 bit system:
  sudo dpkg --add-architecture i386
  sudo apt-get update
  sudo apt-get install lib32z1 lib32ncurses5

  sudo apt-get install libudev1:i386

  sudo apt-get install libgl1-mesa-glx:i386

  sudo apt-get install libalut0:i386

For alternative system configurations and other distros, the commands ldd
and
lddtree can be useful in identifying missing dependencies.

@EfreetSK You have to download and extract the package libdrm-
intel1_2.4.56-1 in for 32bit and 64bit architectures. Then extract all files
placed in the /usr/lib/i386-linux-gnu/ (i386 package) to
~/.steam/ubuntu12_32 and all from /usr/lib/x86_64-linux-gnu (x86_64 package)
to ~/.steam/ubuntu12_64.

LD_PRELOAD set by steam should make it search first on ~/.steam/ubuntu12_64
and ~/.steam/ubuntu12_32 than /usr/lib/...
"
You have to download the 2.4.56-1 version of libdrm-intel1, not the latest

It is the last one who make this crash happen
