Python venv

To start a virtual python environment for testing, development and installation of packages/modules with pip separate from the os or user level, follow these instructions:

Main installation of venv if not already installed:

```
sudo apt install python3-venv
```

Create and activate the venv:

```
python -m venv directory-of-venv
cd directory-of-venv/bin/
source activate
```

Deactivate the venv:

```
deactivate
```
